## Why cut corners? Save time with our new preassembled shingle corner!

### The maibec Woven Corner Inspired by top shingle installers

Introducing the **maibec** Woven Corner, a preassembled inside or outside shingle corner that increases productivity on the job site, provides a professional finish and eliminates the need for touch-ups or cuts.

#### Feedback from a top installer

*“The Maibec Inside and Outside Woven Corners are an easy and practical way to perform laced corners. On a test this past April in Barnstable with Bleaching Oil Woven Corners, we saw that this product would allow us to increase our productivity by 20%. Furthermore, no touch-up was necessary, which makes for a nicer finish.”*

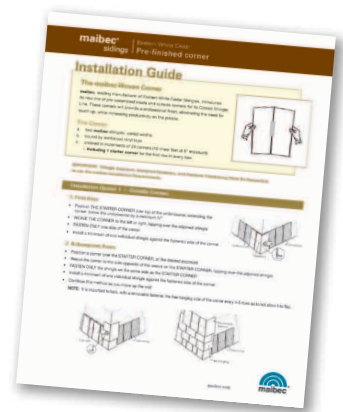

Tim Meagher, Meagher Construction Inc., Centerville MA.

#### How it works

- Two **maibec** shingles of varied width cut at the right angle are bound by reinforced vinyl tape.
- Ordered in increments of 24 corners (10 linear feet at 5" exposure). One starter course for the first row is included in every box.
- Our special installation guide makes installing the **maibec** Woven Corner easy. For a printed or electronic copy, contact your **maibec** Distributor.

See our installation video on the Internet at [youtube.com](http://youtube.com). Simply enter **The maibec woven corner** in the YouTube search bar.

### The maibec Wides Pre-packaged to make life easier!

**m**aibec Factory-Trained Shingle Installers all pinpointed the many advantages of having separate bundles of wide shingles when installing in dormers and gables. Not only does this eliminate the need to sort shingles as is normally done with traditionally bundled boxes, but it saves time on measuring angles, reduces the number of cuts required and maximizes the amount of material to work with. It also cuts down on handling, which in turn protects the coating of the pre-finished material from scrapes.

To make your life easier, a portion of the wides in every Nantucket custom color order are packaged in a clearly identified box. If the number of wides provided exceeds the linear feet of rakes and cheeks, simply re-introduce them into the normal wall application. **maibec** wides range from 8 1/2" to 11" in width.

#### Feedback from a top installer

*"Before the maibec wides, we spent an entire day pulling wides from 50 squares to shingle 70 dormers and gable ends at the golf course. At the end, we had to do it again settling for smaller shingles to complete*

*the angle cuts. That also left us with 200 bundles of nothing but small shingles.*

*With the maibec wides, we place the bundle at the saw, make the roof cuts, saving the bottoms for the rake cuts which usually are the same pitch and don't need to be cut again. The regular bundles are used on the walls with ONLY the very wide shingles removed as the stock is used. Makes the actual wall go smoothly with the untouched bundles. Makes for an efficient and nice looking job. And a neat job site."*

James Lydon Jr, James Lydon, Sons & Daughters, Nantucket MA.
